

GETTING TO KNOW THE WINDOWS MOVIE MAKER INTERFACE.

Tools - from this menu you can choose to add text/credits as well as add video transitions and effects.

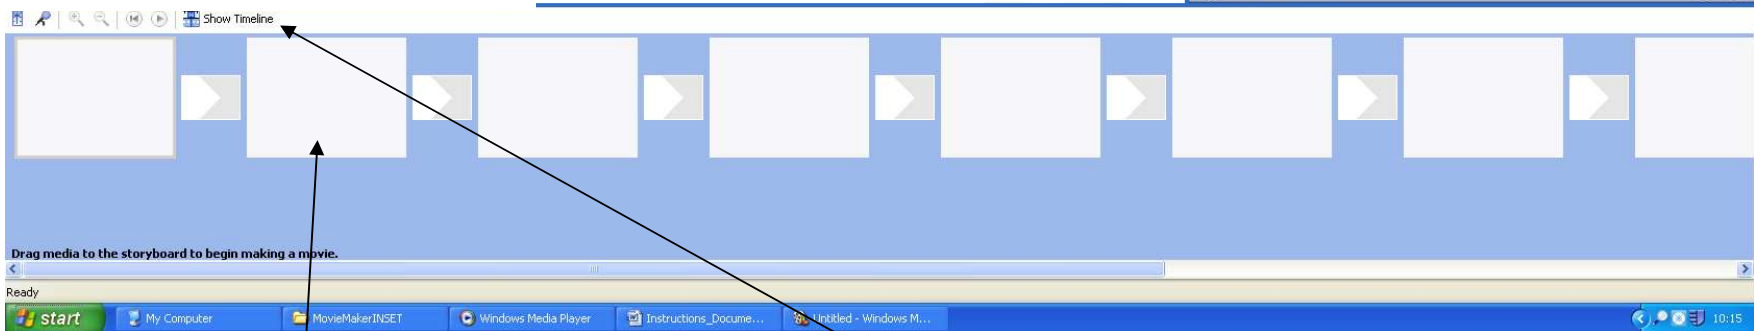

This is the **collections window** – when you add images / video clips – you will see them in here.

Simply drag them from here to the storyboard below to add them to your movie!

This is the **Preview window** – here you can preview your movie at any time by clicking play (operates just like Windows Media Player)

To Save your project so you can edit it in the future you will need to use **Save Project As** – which can be found under the **File menu**

To be able to play back your movie in class and on a different computer you will need to make the movie – select **Save Movie File** from the File Menu (**It is Essential you do this to be able to view your movie!!**)

Storyboard – you can drag images / video clips to here and rearrange them as you want.

Once you have your clips in place / order – you can change timings / add and manipulate text – you will then need to see the Timeline view – by clicking on **Show Timeline**
